Blockchain: Tools and Technologies
(c) Sergey Sinitsa 2024

LAB 7

1. Install Tonkeeper on your smartphone, set it to development network. Get some Dummy TON for current test network. Exchange some TON with your group mate. Take the screenshots.

2. Develop and deploy NFT collection and token smart contracts. Deploy them. Mint some tokens. Take screenshots from TON blockchain explorer.

3. Bonus task 1 for a team: deploy NFT to main net and add NFT tokens to your vk.com social network account.

4. Bonus task 2 for a team: develop soulbound NFT token smart contract, deploy NFT to main net and add NFT tokens to your vk.com social network account.

5. Upload your report to Moodle.

Guideline:

Use examples from Lecture 7.
